

Assignment No 05

Submitted by: Pradnya Shailendra Pangavhane

Chart1 : Donut Chart

Sum of Profit by Segment

Storyline:

The chart illustrates how total profit is shared among different business segments, highlighting which segments contribute the most and least to overall profitability.

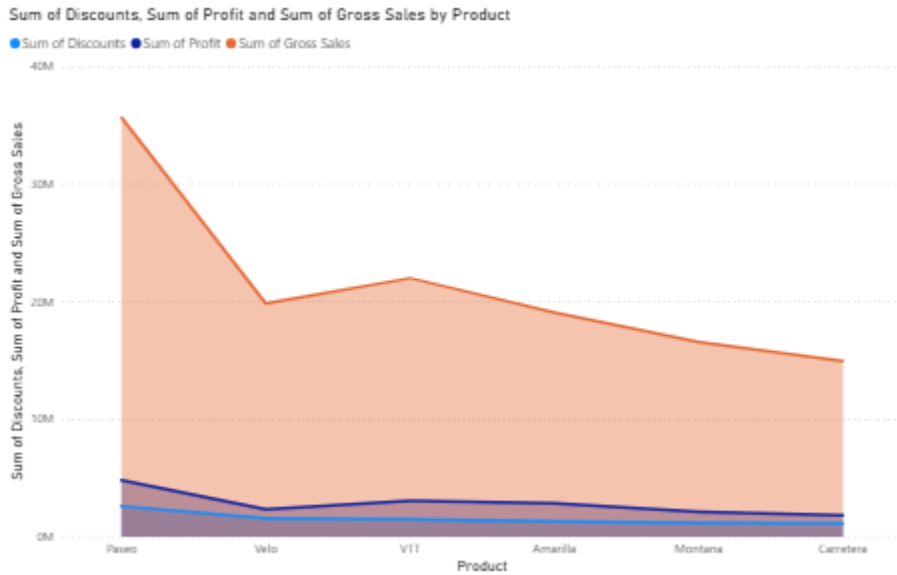

Analysis:

The Government segment holds the largest share of profit, clearly outperforming all other segments.

Result:

Overall profit is heavily driven by the Government segment, indicating it as the primary revenue source, with growth opportunities existing in the smaller-contributing segments.

Chart 2 : Area Chart

Storyline:

The chart shows the relationship between gross sales, profit, and discounts across products.

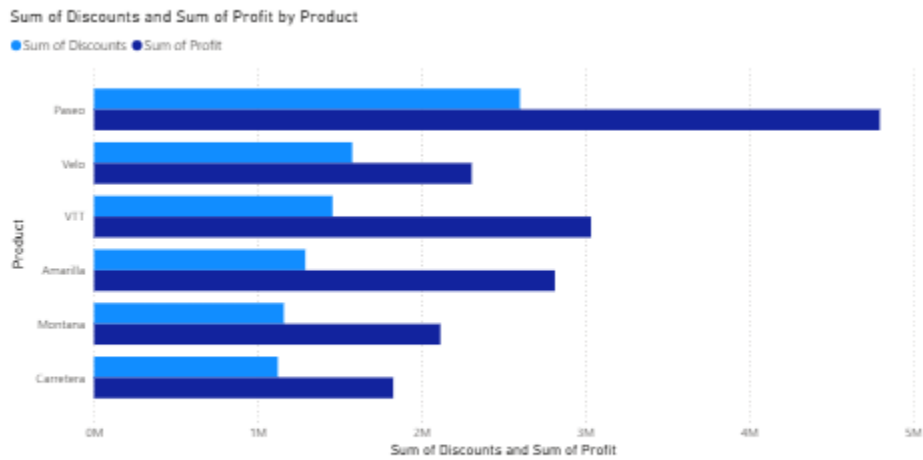

Analysis:

Paseo leads in both sales and profit, while other products show a gradual decline. Discounts remain comparatively low.

Result:

Paseo is the strongest product, and other products have lower performance with scope for improvement.

Chart 3 : Stacked Bar Chart

Storyline:

The chart compares total discounts and profit for each product to understand how discounting impacts profitability.

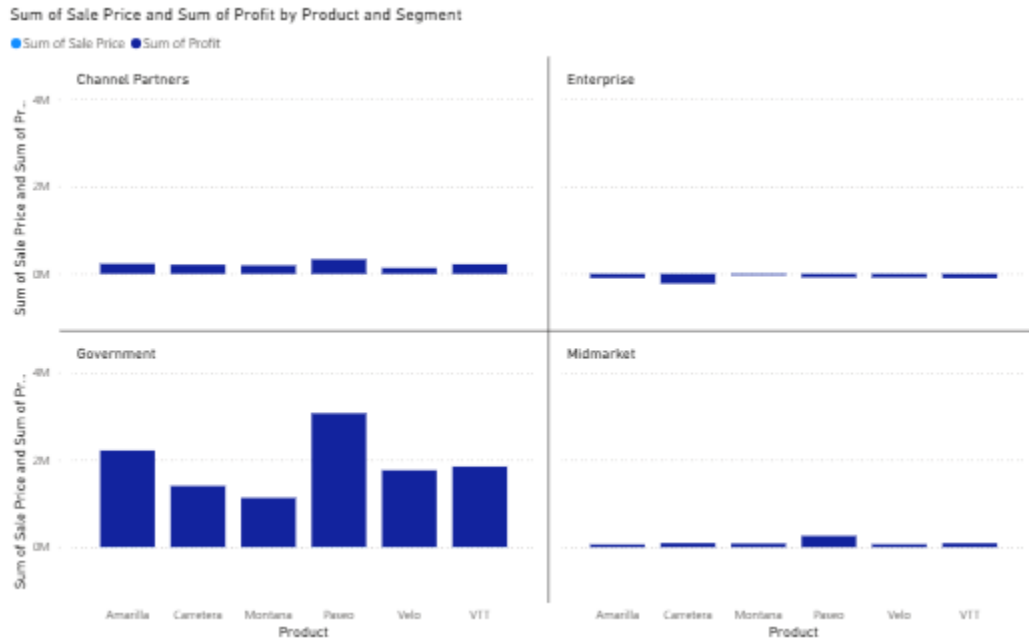

Analysis:

Paseo generates the highest profit despite offering higher discounts.

Result:

Paseo is the most profitable product overall, and balanced discount strategies appear more effective for maximizing profit across other products.

Chart 4 : Stacked Column Chart

Storyline:

The chart compares sales price and profit across products, segmented by customer type, to understand segment-wise performance.

Analysis:

The Government segment shows significantly higher sales and profit across all products, especially for Paseo. Channel Partners, Enterprise, and Midmarket segments have much lower and relatively uniform values.

Result:

Overall sales and profit are primarily driven by the Government segment, while other segments contribute minimally and present opportunities for growth.

Chart 5 : Stacked Column Chart

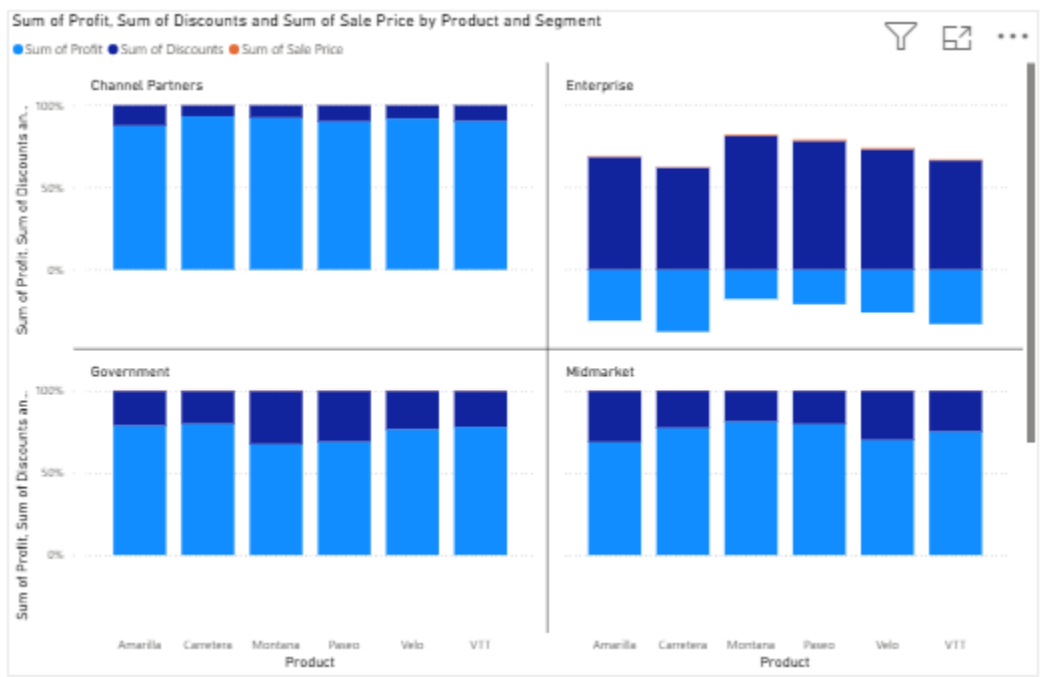

Chart 6 : Scatter Chart

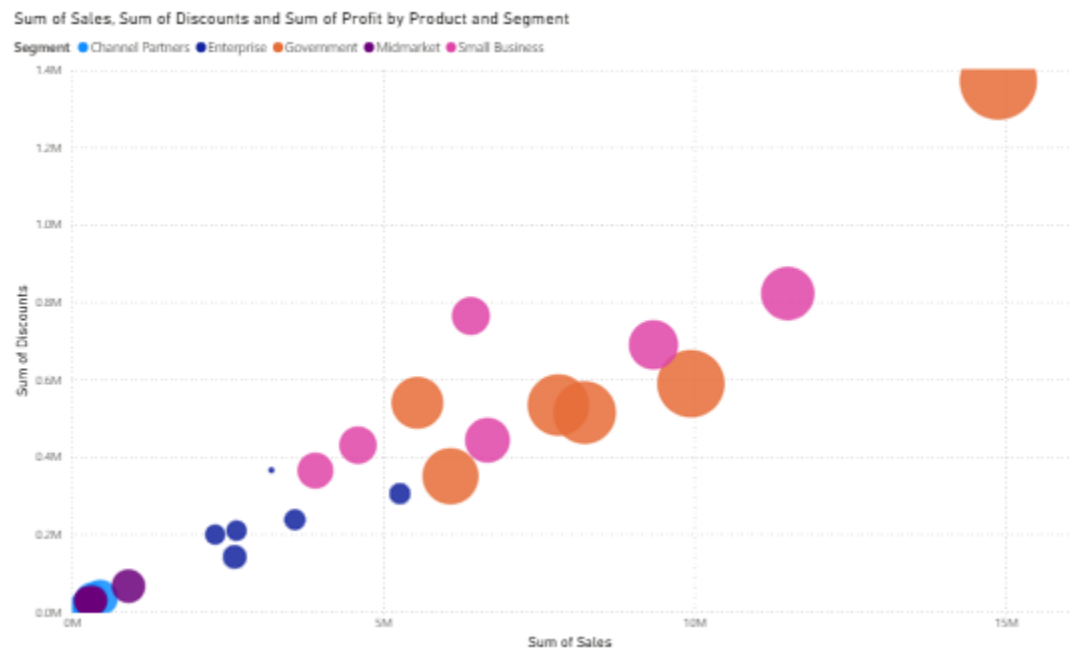

Chart 7 : Waterfall Chart
